SUMMARY

Computer Science graduate with hands-on experience in machine learning, data analysis, and AI application development. Experienced in building end-to-end ML solutions involving data preprocessing, feature engineering, classification, regression, model optimization, and deployment. Skilled in Python, Scikit-learn, XGBoost, and ML engineering tools, with experience developing AI-powered and data-driven systems.

EDUCATION

Bachelor of Science in Computer Science (BSCS) *2022 – 2026*
University of Central Punjab, Lahore, Pakistan

TECHNICAL SKILLS

Programming	Python, Java, JavaScript, Kotlin, Flutter, React.js, React Native, Node.js, HTML, CSS
Machine Learning	Scikit-learn, XGBoost, Regression, Classification, Feature Engineering, Model Evaluation
Data Science	Pandas, NumPy, Matplotlib, Seaborn
ML Engineering	MLflow, Optuna, SHAP, FastAPI
Databases & Tools	SQL, PostgreSQL, Git, GitHub, Docker

EXPERIENCE

Python Intern *Oct 2026 – Present*
Oasis Infobytes *Remote*

- Developing Python-based applications and working on programming and data-related tasks.
- Applying Python concepts and libraries to implement practical solutions and improve coding skills.

AI Intern *Sep 2026 – Oct 2026*
Decode Labs *Remote*

- Worked on AI and machine learning tasks involving data preprocessing and model development.
- Applied Python and machine learning concepts to develop and evaluate practical AI solutions.

PROJECTS

Market Spy – AI-Powered Product & Trend Tracker *Final Year Project*
Tech Stack: Python, XGBoost, Linear Regression, React.js, React Native, Node.js, PostgreSQL, Web Scraping

- Developed an AI-powered platform to collect and analyze product data from Amazon and Daraz.
- Implemented Linear Regression and XGBoost for price forecasting and emerging trend detection.
- Built real-time alerts and dashboards for price drops, demand surges, and market insights.

Customer Churn Prediction
Tech Stack: Python, Pandas, NumPy, Scikit-learn, XGBoost, Optuna, MLflow, SHAP, FastAPI, PostgreSQL, React, Docker

- Built an end-to-end customer churn prediction system using XGBoost and feature engineering.
- Applied Optuna for hyperparameter optimization and MLflow for experiment tracking.
- Integrated SHAP, FastAPI, PostgreSQL, React, and Docker for explainability and deployment.

Basic Image Recognizer
Tech Stack: Python, Scikit-learn, NumPy, SVM

- Developed an image classification model using Support Vector Machine (SVM).
- Applied NumPy and Scikit-learn for image preprocessing and model development.
- Built a basic system for recognizing and classifying handwritten images.

CERTIFICATIONS

SQL Certificate – Databricks
Mobile Application Development Certificate – NAVTTC
